Any commercial metal—steel, cast iron, practically all ferrous and non-ferrous alloys and non-ferrous metals—can be joined advantageously by oxwelding.

At Lehigh University Packard Laboratory Piping is Oxwelded

OXWELDING was selected as the means of installing the piping system of the James Ward Packard Laboratory because of its many advantages over other methods of pipe joining. It lowered costs in every step of the installation. Design was simplified. Fittings were fabricated from standard pipe section. Weight was reduced. Insulation was facilitated and less time was required to complete the job. The piping system in this building is permanent. Every joint is as strong, as tight, as leak-proof and as lasting as the pipe wall itself.

The oxy-acetylene process of welding and cutting metals has many other interesting applications in the design, construction or fabrication of metal parts or structures. Tomorrow's engineers will be expected to know how to apply this modern metal-working process. Several valuable and interesting technical booklets on design and applications are available. Write us if you are interested.

THE LINDE AIR PRODUCTS COMPANY

Unit of Union Carbide and Carbon Corporation

126 Producing Plants

627 Warehouse Stocks

IN CANADA, DOMINION OXYGEN COMPANY, LTD., TORONTO

26 District Offices

DYNAMITE clears the way for modern engineering wonders!

THE EMPIRE STATE BUILDING . . .

How DYNAMITE was used in the construction of the world's tallest building

A NEW giant skyscraper now looks down on New York's magnificent skyline. It is the Empire State Building . . . and its topmost peak towers 1248 feet *above* the earth!

It is the newest engineering marvel. Architects, engineers, steel workers, riveters shared in its making. But *one* mighty ally . . . DYNAMITE . . . was first on the scene to do its powerful bit.

Working efficiently, quickly, Dynamite blasted out solid rock so that the great foundation, 75 feet *below* the earth, might be placed. Thirteen thousand pounds of du Pont Dynamite was used on the job.

Skyscrapers . . . tunnels . . . bridges . . . highways . . . dams . . . reservoirs . . . these and numerous other engineering wonders are made possible through the aid of Dynamite.

If you would like to learn more about explosives and how to use them . . . if you want to learn today for tomorrow's jobs . . . simply write direct to the du Pont Company for full information.

You will receive a copy of *The Blasters' Handbook*, which contains a great deal of the vast knowledge of the explosives gained by the du Pont Company in 129 years of making and testing explosives. This book is used in the classrooms and libraries of leading technical institutions. Your copy is free. Write for it.
